

CLAIMS

What is claimed is:

1. A transportation system for conveying vehicles,
5 comprising:
 - a first and second rail, the first and second rails being mutually parallel from one another;
 - a first and second set of wheels, the first and second set of wheels respectively disposed from the first and second rails
10 and having mutually parallel, substantially coplanar axes of rotation in movable contact with a vehicle disposed on the first and second rail; and
 - a third set of wheels disposed from at least one of the first and second rails, the wheels of the third set being
15 mutually parallel and having substantially coplanar axes of rotation, and comprising:
 - a substantially flat outer surface and parallel raised portions, and
 - a substantially flat recessed portion, the recessed
20 portion in guiding communication with the vehicle.
